PHP & MYSQL

Project Management

Communication

Problem Solving

### PROJECTS:

Admin Panel: I have used React JS to build the interface of this UI only.

Blog: I have used React JS to build the interface of this and made APIs

### PROFILE

I am a dedicated and skilled Full Stack Developer with a strong foundation in frontend technologies. I began my professional journey with a frontend development internship at Kirabiz, which I completed from 11th December 2023 to 11th February 2024. During this time, I gained valuable experience in building responsive and user-friendly interfaces. After my internship, I expanded my skill set to become a Full Stack Developer, acquiring knowledge in backend technologies, database management, and full-cycle application development.

As part of my academic journey, I developed a college project named "Trendio", an e-commerce web application that showcases my ability to design and implement complete, functional systems. My approach is always focused, reliable, and driven by a passion for creating efficient and scalable digital solutions.

### EDUCATION HISTORY

#### Bachelor of Computer Applications. 2022–25

VNSGU(C. K. Pithawalla College of Commerce – Management – Computer Application): SEM:5 SGPA:7.78
